

ACO ThresholdDrain

OnePour ThresholdDrain

PORTFOLIO

The Avenues, Metlifecare Tauranga

The Avenues, Metlifecare in Tauranga is a new retirement village catering to the growing need for care facilities in the Bay of Plenty. A multi-unit facility with many of the entrances requiring level threshold access, an E2 compliant drainage solution was required and the Architects chose to use the recently introduced ACO OnePour ThresholdDrain. Its unique design requires only one concrete pour. Bolting to the exterior slab, the frame sits above a one pour cast in-situ channel so it is easy to detail and install.

Benefits

- ACO's ThresholdDrain convinces with its code-compliance, functionality and aesthetics
- Protecting the entrance threshold from surface water entering the building, also runoff from doors and windows is collected during storms.
- The system provides E2 compliant level threshold drainage, complying with AS 1428.2 (Clause 9c), Access and Mobility, ensuring safe passage of walking canes and wheelchairs.
